GROWING TIPS

STEP 01.

KEEP CLEAN

Disinfect all work surfaces. Wear a mask + gloves.

STEP 03.

COVER UP

Use the sticker provided to cover the injection hole.

INCUBATE YOUR BAG

The bag should be kept in the dark between 21-24°C.

STEP .04

STEP 05.

CLEAN TUB

Clean your mono tub with alcohol.

STEP 06.

CHECK SUBSTRATE HYDRATION

Grab & squeeze Sporeo Substrate. It should be moist. Only a few water drops should come out. Spray water if the substrate is too dry.

STEP .07

PREPARE TO MIX

Once the colonized grain is visibly white & entirely consolidated (7-10 days), its ready to mix with Sporeo Substrate.

STEP .07

STEP 08.

POUR SUBSTRATE

Fill your mono tub with substrate.

STEP .09

MIX WITH YOUR STERILIZED GRAIN

Use gloves to mix Sporeo Substrate + consolidated grain together. Even it out in one layer.

STEP 10.

SEAL IT UP

Seal holes on mono tub so there is no air flow. Allow mix to incubate to full colonization. Remove seals and replace with perforated material to allow fresh air exchange.
